

What's The Point?

Just that – it collects data automatically from a single point, without fuss, and reports information in a timely fashion enabling users to manage their assets in an efficient and effective manner.

The Point has been developed with sub-metering and AMR in mind, where water consumption and usage profiling is part of an active water management programme.

The Point's small footprint of just 156mm x 110mm x 112mm, enables it to be deployed in small Atlas boxes or meter pits where other loggers are too large. Its design exploits mainstream technologies, which helps to minimise costs whilst at the same time ensuring reliability. With IP68 rating, the Point uses the latest developments in low power technology deriving all the power it needs from an inexpensive field-replaceable battery pack. Together with the integral GPRS modem, this ensures a long service life with low infrastructure and minimal maintenance costs.

The Point offers water service companies a monitoring product which is simple to use and to install. For those organisations that require a reporting package, Metasphere can provide this, enabling a company to support its monitoring service to its commercial and industrial clients.

For more information on the Point and Metasphere's range of asset monitoring products and services, call 01737 846100 or visit www.metasphere.co.uk
